Quasar absorption spectroscopy

Ground telescopes | Large samples at $z < 0.4$

UV

Optical

Ca II

$z = 0$

A diagram illustrating the spectral range for quasar absorption spectroscopy. It features a horizontal bar with a blue-to-white gradient. The bar is divided into two sections by a vertical line. The left section is dark blue and labeled 'UV'. The right section is lighter blue and labeled 'Optical'. Within the 'Optical' section, there is a white line representing a spectral feature, specifically the Ca II H&K lines, with the label 'Ca II' above it. Below this feature, the text 'z = 0' is written.
